

Introduction to

University of Florida

Nuclear & Radiological Engineering (NRE) Department
(Students, Faculty & Research)

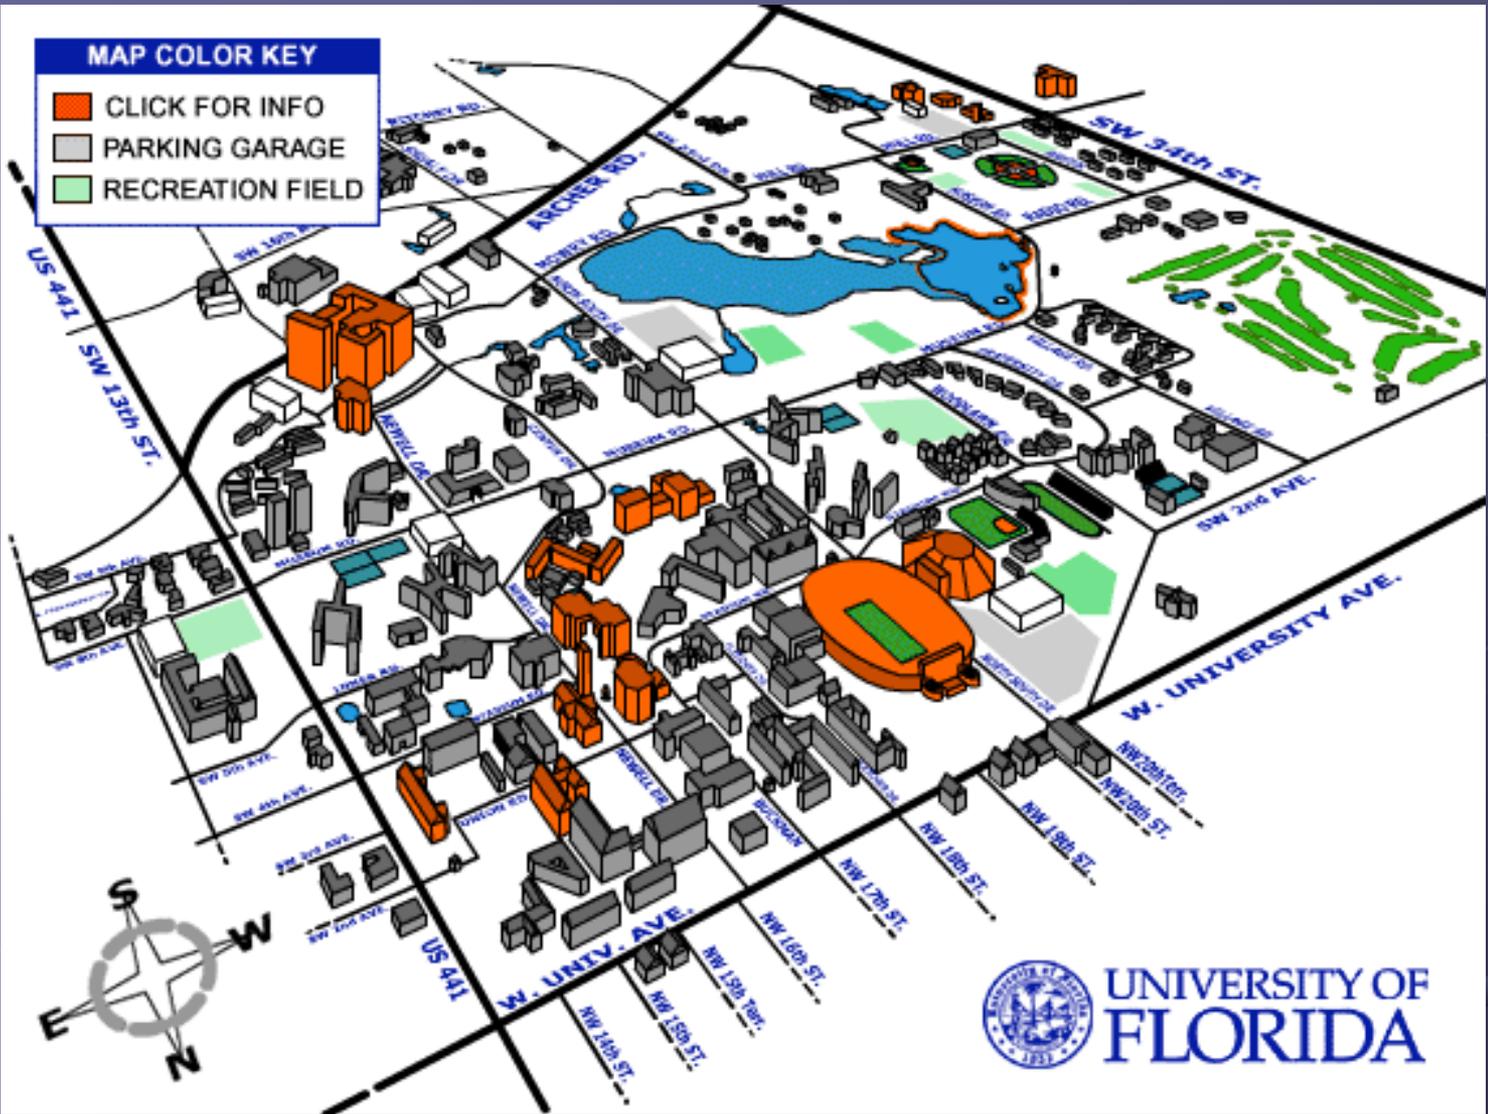

Dr. Alireza Haghghat (haghghat@ufl.edu)
Professor and Chairman
(352) 392-1401 Ext. 306

University of Florida

It currently ranks among the top five universities in the nation in the number of degrees and programs available to its nearly ~49000 students.

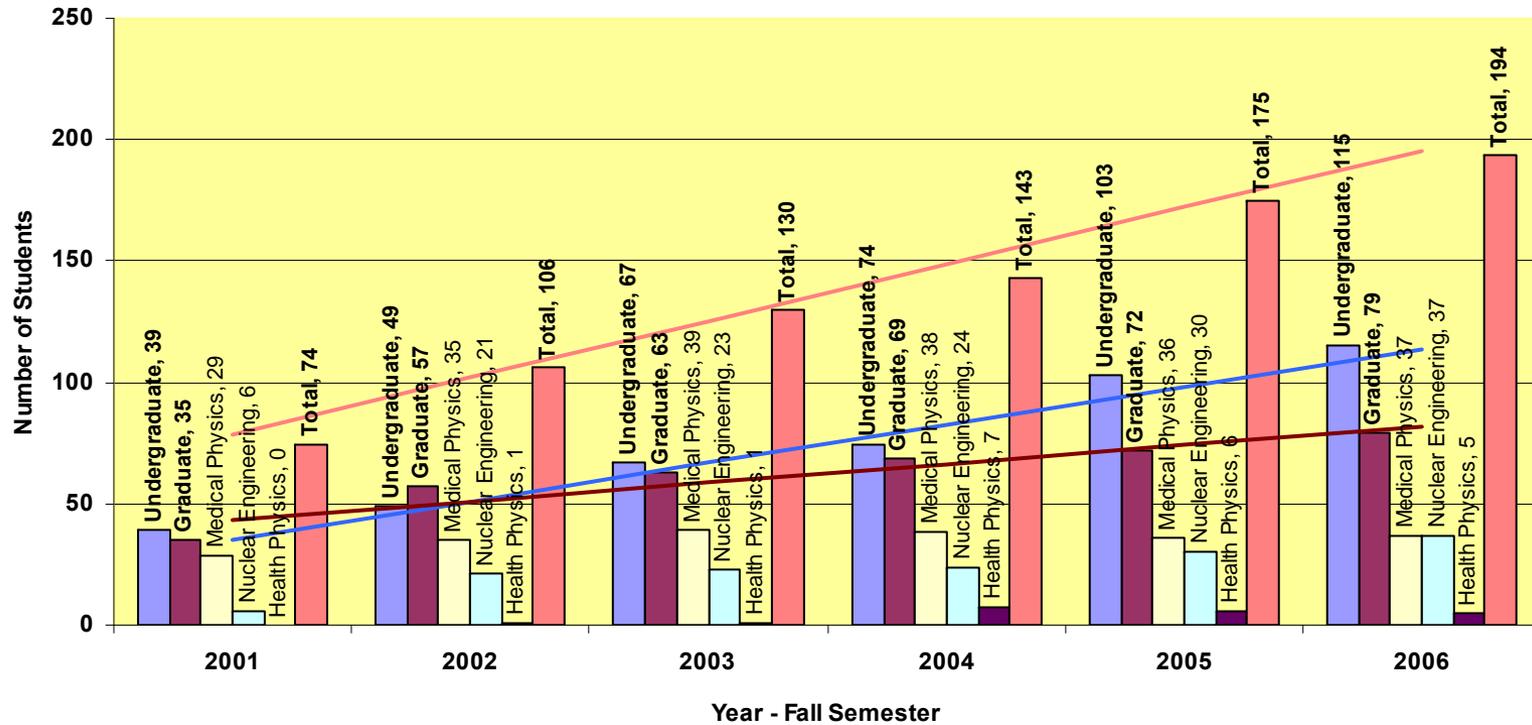

College of Engineering (COE)

- 11 departments; 280 faculty
- Number of undergraduate students is ~5000
 - Incoming freshman class for the last two years has an average SAT of ~1310
- Number of graduate students is ~2000

Degrees offered at NRE

- **B.S.**
 - Nuclear Engineering (NE) (ABET accredited)
 - Nuclear and Radiological Sciences (NRS)
- **M.S. & Ph. D.**
 - Nuclear Engineering
 - Medical Physics [CAMPEP (Commission on Accreditation of Medical Physics Educational Programs) accredited]
 - Health Physics
- **Developing a new PhD Track**
 - Computational Medical Physics (CompMP)

NRE Enrollment

Scholarships/Fellowships

● Department

- Elite Nuclear Engineering (\$6000 per year; starting as a sophomore or junior)
 - 2 Florida Power Light
 - 2 Progress Energy Florida
 - 2 Southern Nuclear Operation Company
 - 1 KAPL
- Private “named” (\$1000 - \$2000 per year)
 - Undergraduate
 - Pagano
 - Schessow
 - Graduate
 - Swander

● Others

- ANS
- College of Engineering, UF
- DOE
- DOE-AFCI
- DOE-Navy
- NANT (INPO)

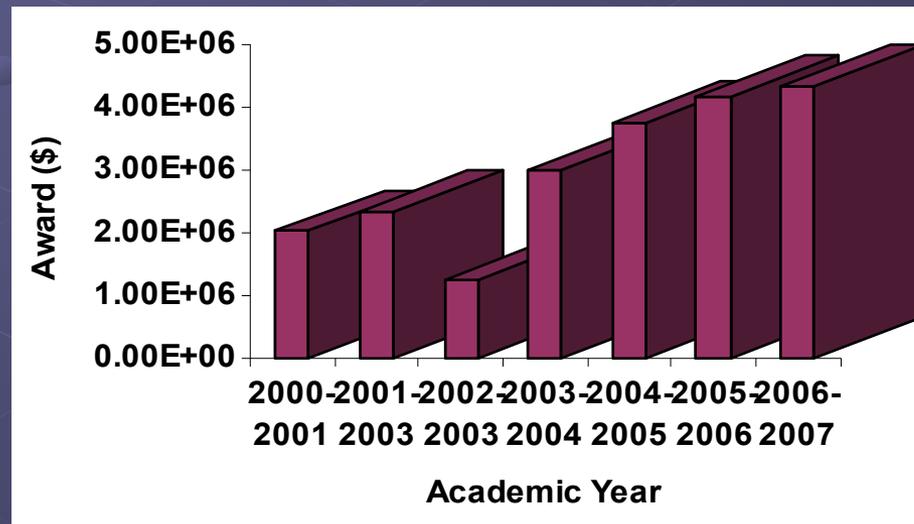

Research Activities

- **Homeland Security & Nondestructive Detection**
- **Medical**
- **Nuclear Power**
- **Space Nuclear Propulsion**

Research Projects & Scholarships/Fellowships

(~\$4,750,750)

*NE = ~24.3%, MP+HP = ~41.5%, INSPI = ~3.9%,
UFTR=~9.6%, FINDS = ~15.5% Fellowships + grants = ~5.3%*

**NRE Faculty
Research Interests**

Dr. Anghaie (Prof.) (Director of INSPI) (anghaie@ufl.edu): Reactor design, Fluid dynamic simulation, thermal hydraulics, nuclear materials, Inverse transport simulation **(NE + MP)**

Dr. James Baciak (Assistant Prof.) (jimmer@ufl.edu)- Radiation measurements, room temperature gamma-ray spectroscopy, radiation instrumentation, scintillation detectors, compound semiconductor materials, national security - nuclear nonproliferation, active and passive interrogation, gas detectors. **(NE + MP)**

Dr. Wesley Bolch (Prof.) (Grad. Coordinator) (HP Coordinator) (wbolch@ufl.edu): Assessment of internal organ dose from external and internal radiation sources, use of medical images for improved anatomic modeling during radiation transport simulations, and radiation bioeffects at the molecular level. **(HP + MP)**

Dr. Rebecca Detwiler (Research Assistant Professor) (rdetwiler@ufl.edu) Evaluation and enhancement of radiation detection equipment, simulation of man-made and natural effects on neutron background and field detection, and providing training for DOE emergency response facilities on detection equipment. **(NE – Homeland Security)**

Dr. Edward Dugan (Associate Prof.) (Undergrad. Coordinator) (edugan@ufl.edu) - Radiation transport, Monte Carlo analysis, reactor analysis and nuclear power plant dynamics and control, space nuclear power and propulsion, and radiographic imaging techniques applied to non-destructive examination **(NE)**

Dr. David Gilland (Associate Prof.) (gilland@ufl.edu): Medical imaging, nuclear medicine imaging, single photon emission computed tomography (SPECT), positron emission tomography (PET), medical image processing, image reconstruction from projections, medical image evaluation using receiver operating characteristic (ROC) analysis. **(MP)**

Dr. Alireza Haghighat (Prof.) (Chairman) (haghighat@ufl.edu) - Particle transport methods and their applications, parallel computing, Monte Carlo methods, reactor physics, perturbation techniques, simulation and design of reactors and nondestructive devices. **(NE + MP)**

Dr. Hintenlang (Associate Prof.) (Coordinator Of MP) (dhinten@ufl.edu) : Clinical applications of radiation imaging and dosimetry. Currently focused on the development of techniques to accurately quantify and minimize pediatric and mammographic doses while optimizing image quality. Development of optimization techniques for state-of-the-art diagnostic imaging modalities. **(HP + MP)**

Dr. Sanjiv Samant (associate Prof.) (samant@ufl.edu) Radiation therapy physic, megavolt x-ray imaging, detector design, medical image processing, Monte Carlo simulation, dosimetry. **(MP)**

Dr. Glenn Sjoden (Associate Prof.)(sjoden@ufl.edu)- Particle transport and numerical methods, nuclear systems analysis: medical, power generation, defense programs, NDT, and detection. Also convective heat transfer, computational fluids, and high performance computing applications. **(NE + MP)**

James Tulenko (Prof.) (tulenko@ufl.edu): Nuclear fuel cycle, radioactive wastes, reactor analysis, engineering application of radioisotopes, robotics, intelligent databases, system analysis **(NE)**.

Dr. William Vernetson (Associate Engineer) (Director of UFTR) (vernet@ufl.edu): Utilization of nonpower reactors, reactor operations and training, nuclear power plant systems, reactor safety and risk assessment, neutron activation analysis, criticality analyses and evaluations **(NE + HP)**.

Affiliate Faculty

Manuel Arreola	Radiology, Assistant Professor
Frank Bova	Brain Institute, Professor
James Dempsey	Radiation Oncology, Assistant Professor
Jatinder Palta	Radiation Oncology, Professor
Tony Manacuso	Radiology, Professor & Chair
Nancy Mendendall	Radiation Oncology, Professor & Chair
Bill Properzio	Director of EHS
Katherine Scott	VA, Physicist
Shalindra Shukla	VA, Physicist
Siyong Kim	Radiation Oncology, Physicist

NRE Performance (fall 2001 – fall 2006)

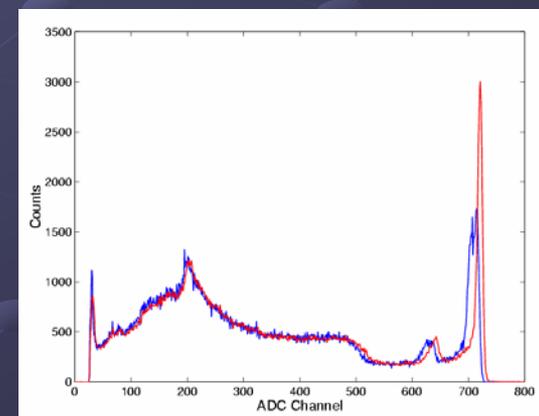

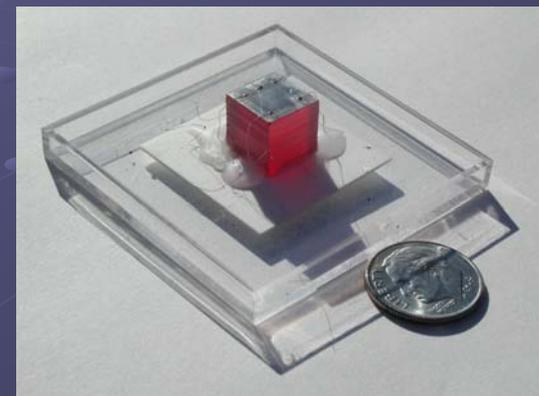

- Student enrollment has increased by a factor of ~2.6
- Sponsored research awards have doubled
- Our teaching load of ~3 is high
- Graduate student per faculty is high: ~8-9

Space Nuclear Power & Propulsion (Samim Anghaie; INSPI)

- Measurement and Quantification of Water Radiolysis in the Mixed Radiation Field
- Development and Hot Hydrogen Testing of Mixed Uranium-Refractory Carbide Fuels for Nuclear Thermal Propulsion Applications
- Design of Test Section for NASA Hot Hydrogen Test Facility
- Space Nuclear Thermal Propulsion Fuels and Materials
- Development and Testing of Foam Nuclear Fuel Matrix

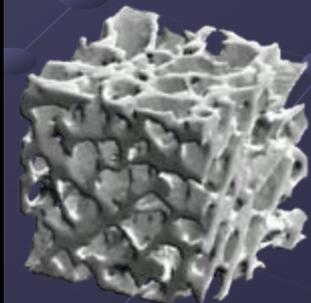

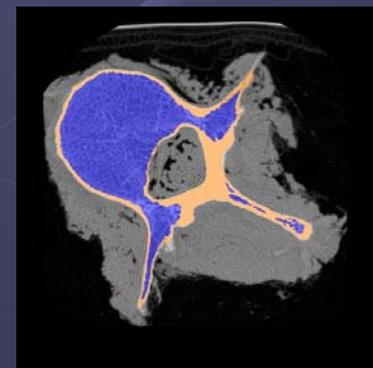

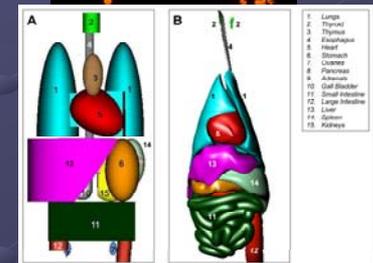

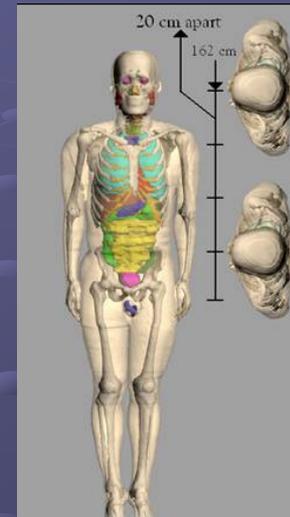

Radiation Measurements and Advanced Detector Systems (James Baciaak; Progress Energy ADRAD)

- Scintillator Detection System for ASEDRA
- HgI₂ Detectors for Room Temperature g-Ray Spectroscopy
- HgI₂ Crystal Characteristics (Measurement of charge transport properties in a-crystallographic direction)
- BiI₃ Gamma-Ray Spectrometers
- LaBr₃ Compton Telescope
- High Pressure Xe Gas Utilizing Pixelated Electrodes for High Resolution g-Ray Spectroscopy

Advanced Laboratory for Radiation Dosimetry Studies (ALRADS) (W. Bolch)

- Bone Imaging and Dosimetry (BID) Project
- 3D Image-Based Skeletal Dosimetry
- Bone Imaging and Dosimetry (BID)
- Pediatric Organ Dose (POD) Project
- Pediatric Organ Dose (POD)
- Pediatric Organ Dose (POD)
- Voxel Phantoms for Evaluation of Rapid Screening Methods Following Radiological Contamination Events
- Radionuclide Therapy for Pediatric Bone Cancer

X-Ray Backscatter Radiography by Selective Detection (RSD) (Ed Dugan; SXI Lab)

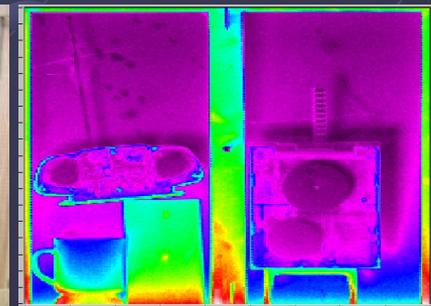

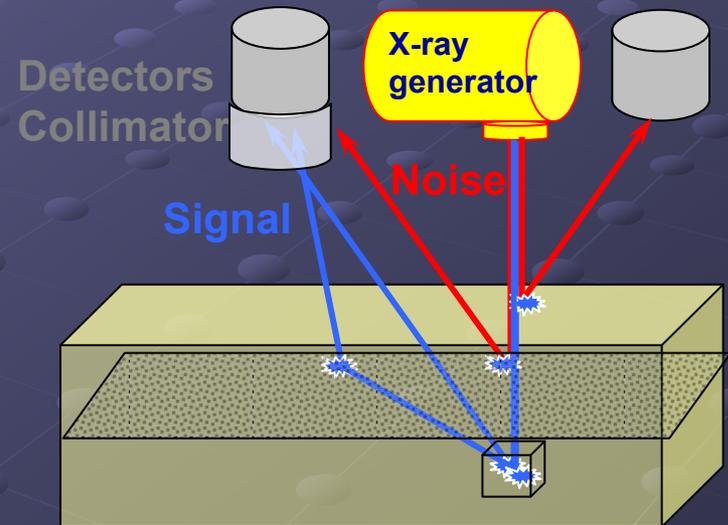

- Land mine detection (U.S. Army)
- Flaw detection (DOE, Lockheed & NASA)
 - Cracks and voids
 - Delaminations
 - Corrosion

Aerospace components; oil and gas pipelines; Rx components; concrete

Materials

- Aluminum and Titanium Alloys (aircraft components)
 - Reinforced carbon-carbon composites
 - Space shuttle external tank foam thermal insulation
 - Honeycomb structures (aircraft wings)
 - Steel foil thermal insulation
 - Laminates
 - Concrete
- Security applications

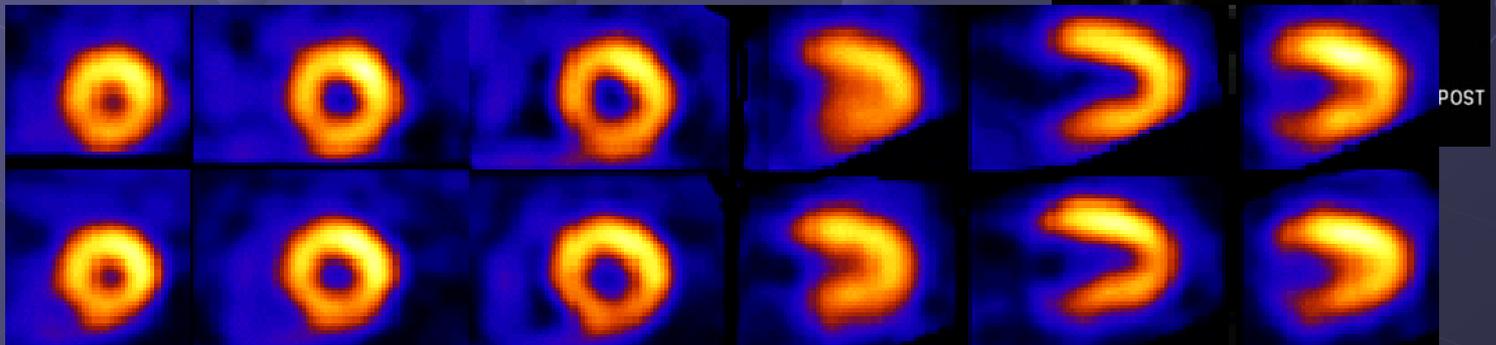

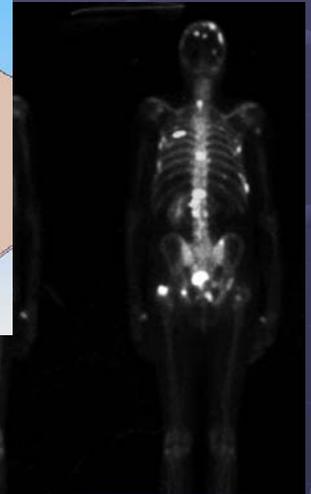

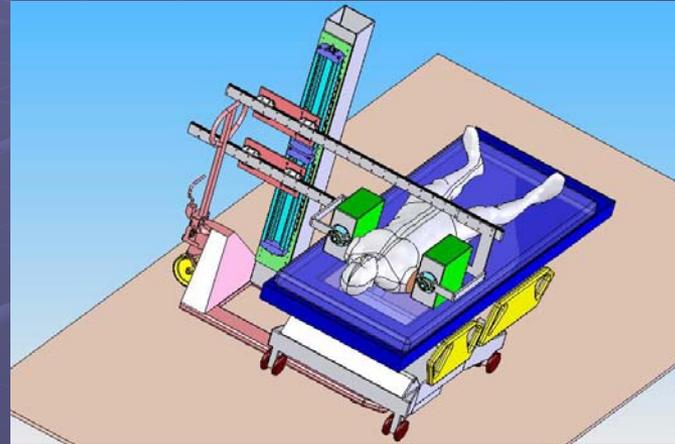

Medical Imaging using Nuclear Medicine (David Gilland)

3D nuclear medicine imaging

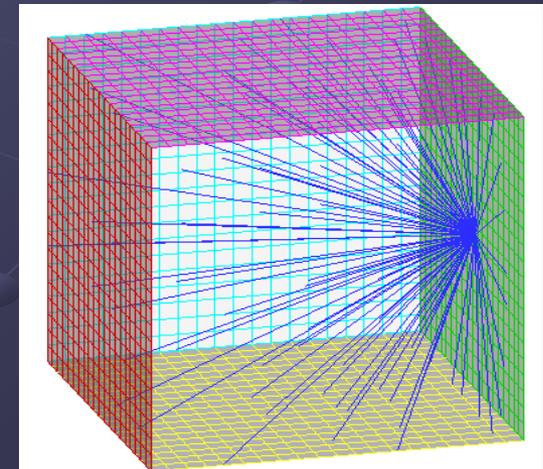

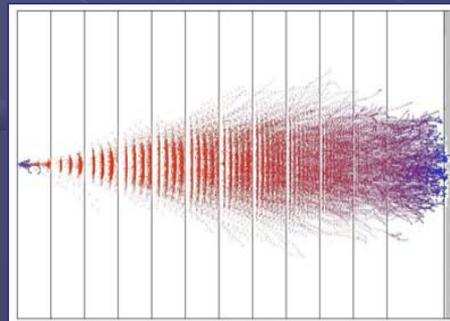

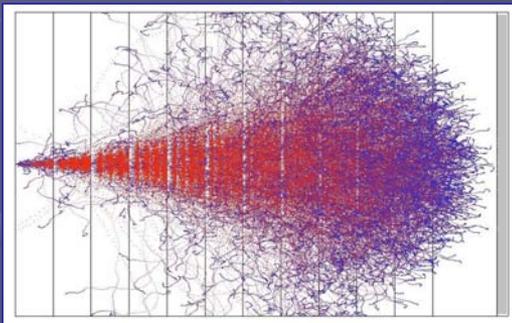

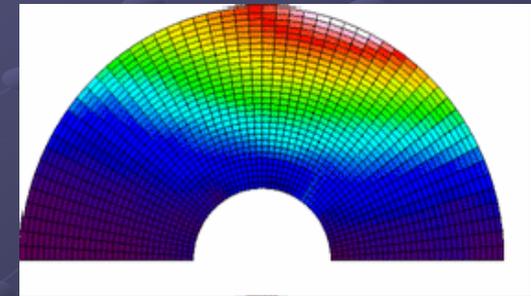

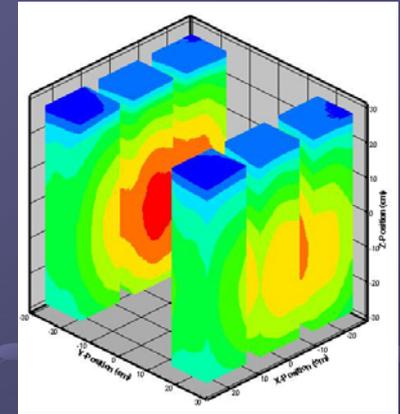

SPECT: single photon emission computed tomography

PET: positron emission tomography

A. Haghghat (UFTTG)

- Acceleration of Monte Carlo Electron Transport
- Acceleration of Monte Carlo Criticality Calculations .Development of Computational Models and Methodologies for Simulation of Scintillator Detectors
- Development of a hybrid method for problems containing low scattering regions
- UFTR Characterization Project
- Design on new experimental stations for UFTR

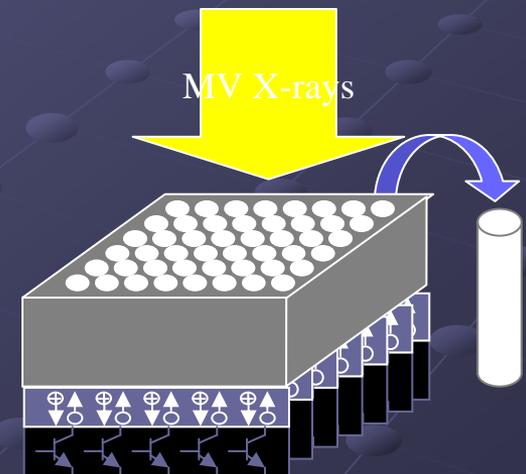

David Hintenlang

- Clinical applications of radiation imaging and dosimetry.
- Optimization of radiological imaging through quantitative evaluation of image quality and patient dose
- Applications:
 - Pediatric Radiology
 - Mammography
 - Computed Tomography
 - Radiation Therapy

Radiation Therapy: Detectors, Image Processing and Image Guided Radiotherapy (Sanjiv Samant)

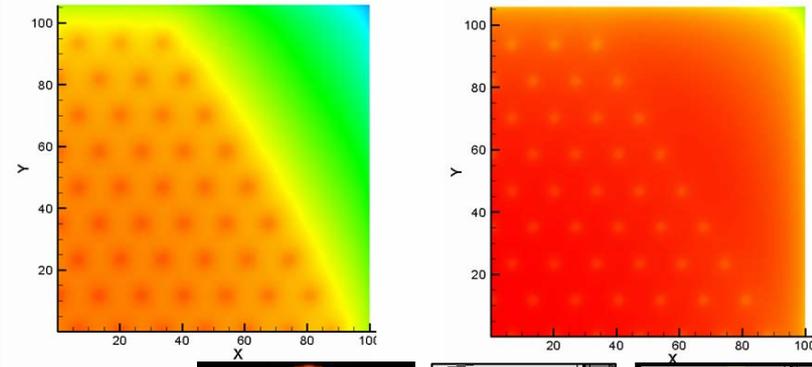

- Design of new imaging systems for improved image quality, very low exposure imaging, customized user interface
- Thick scintillator crystal video
- Fiber-Optic Scintillation Glass Array (FOSGA)
- Application EPID
- Image Guided Radiotherapy (IGRT): Automated position using digital image processing

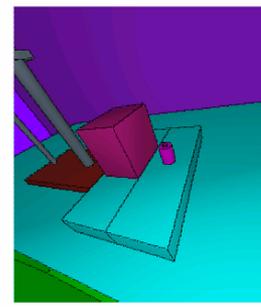

G. Sjoden (UFTTG)

- Design, computationally optimize, and demonstrate an SNM parcel screening device
- **ASEDRA- Advanced Synthetically Enhanced Detector Resolution Algorithm**
- **ACHIP Noise Reduction RDT&E**
- **PENBURN: 3-D Reactor Transport and Burnup Simulations**
- Particle transport methods and numerical methods for solving medical physics problems

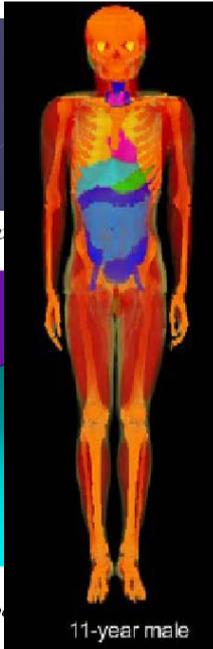

Progress in 3-D Reactor Core simulation (Work with T. Mock, K. Manalo):

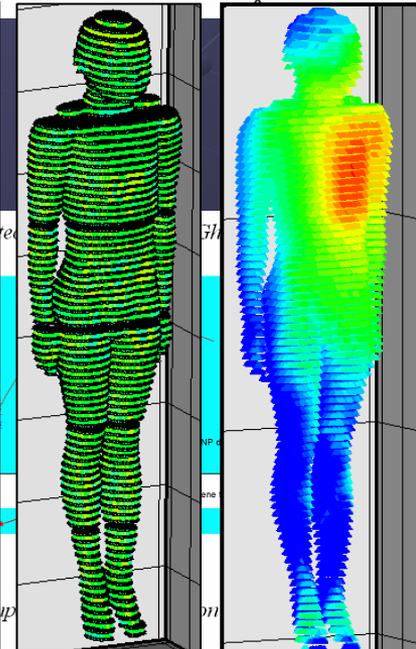

Progress on modeling and exp

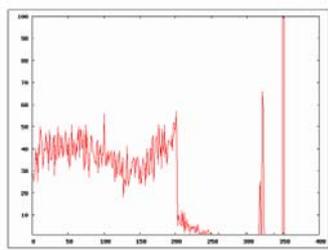

He-3 Monte Carlo Mo

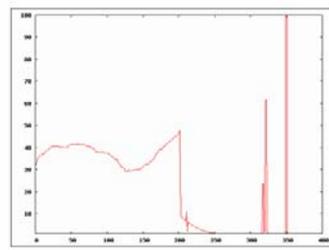

11-year male

Progress on New Adaptive Denoising algorithm for detection (Work with E. LaVigne):

Detector Spectrum before denoising

Detector Spectrum after denoising

J. Tulenko – Advanced Nuclear Fuel (Will retire by the end of fall 2007 semester

- Fuel Design,
- Fuel Performance,
- Fuel Management, or
- Waste Management

Resources

Institutes

[FINDS - Florida Institute for Nuclear Detection and Security \(FINDS\)](#)

[INSPI - Innovative Nuclear Space Power and Propulsion Institute](#)

Facilities

• **Advanced Laboratory for Radiation • Dosimetry Studies (ALRADS)**
• **Advanced Nuclear Fuels and Materials Laboratory • High-Speed Computational Laboratory Hot Cell • Neutron Activation Analysis Laboratory • Particle Transport & Distributed Computing Laboratory (PTDC)**
• **Robotics Laboratory • SPECT imaging laboratory • TLD Dosimetry Laboratory**

Access to:

Six totally filmless Hospitals, part of Shands Healthcare, Inc. • Three 16-slice CT scanners • 3-Tesla clinical MRI scanner • PET imaging facility • State of the art magnetic spectrometers and MRI at the [McKnight Brain Institute \(MBI\)](#)

Nuclear Reactor

[University of Florida Training Reactor \(UFTR, 100 KW\)](#)

Workshops

[Annual International Training Course/Workshop on Methodologies for Particle Transport Simulation and Their Application](#)

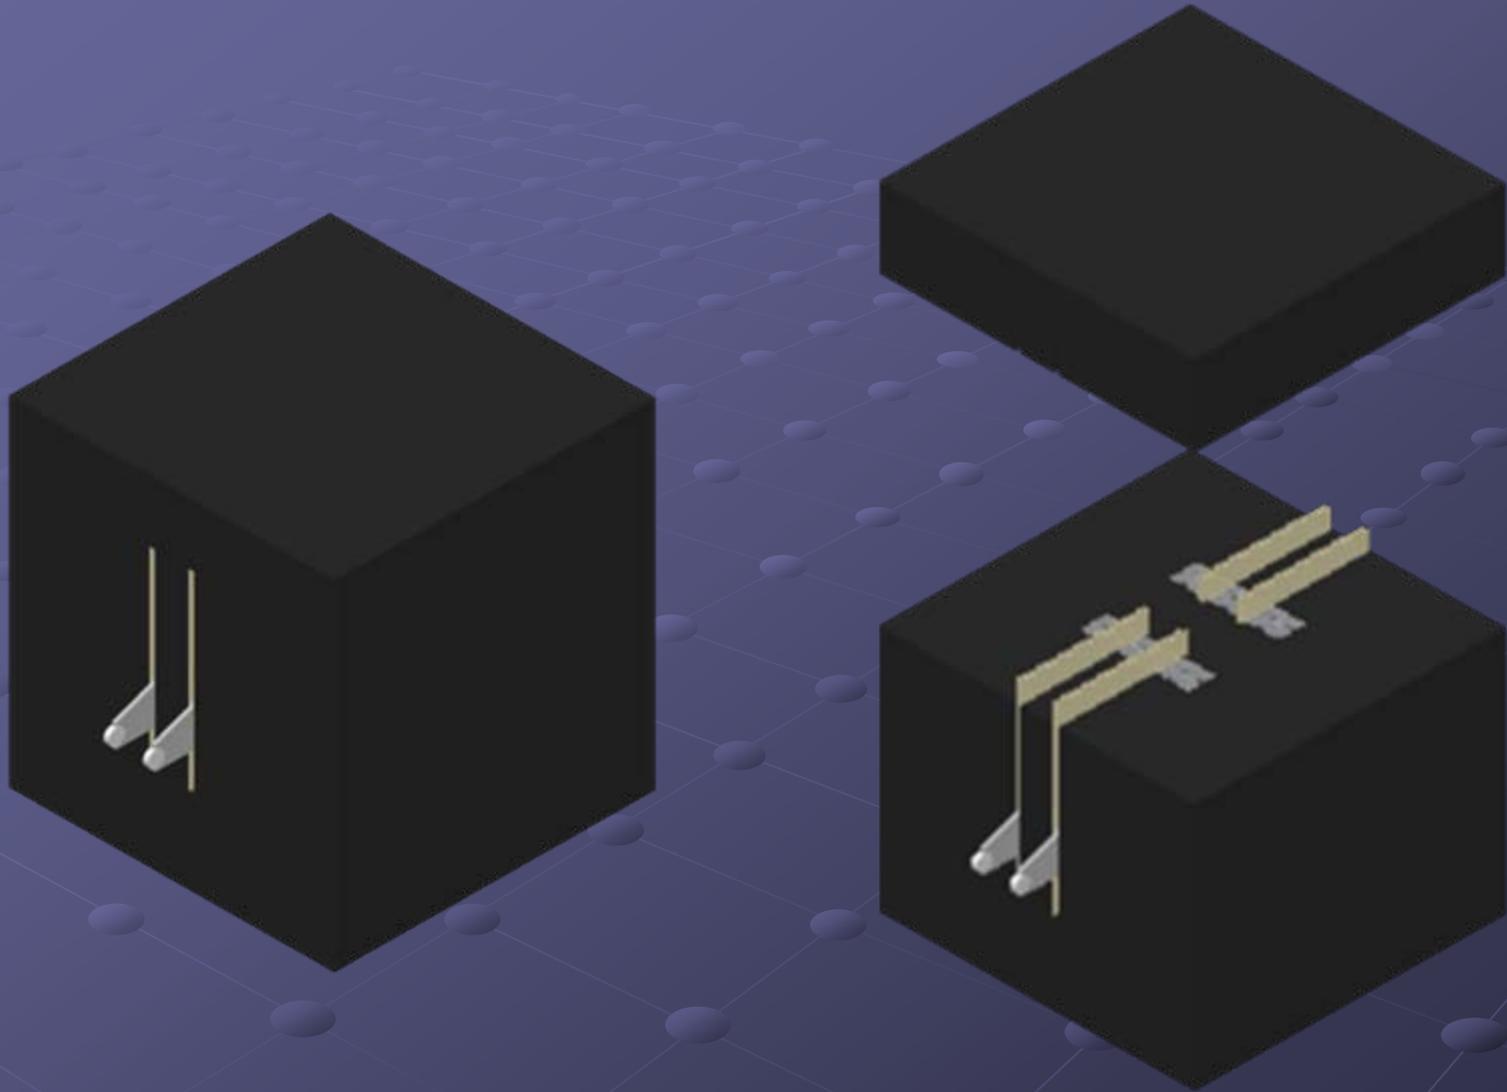

The UFTR HEU/LEU Fuel Conversion Project completed in a record time of 15 months. This work demonstrates that when competent and driven people are assembled, any goal can be accomplished.

Prof. Haghghat led the project that involved Profs. Sjoden and Baciak, and between 9 to 11 graduate students.

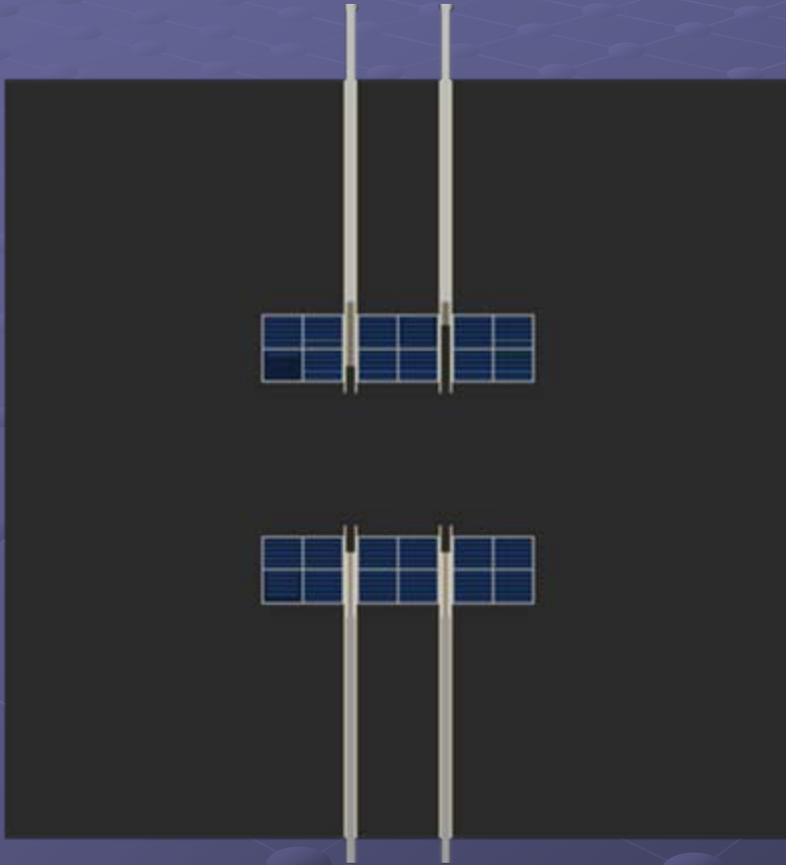

Mr. Benoit Dionne, PhD Candidate was recognized for his exceptional dedicated and contributions to this project

Note: I have been talking with NNSA to become involved in other conversion projects (provide training and perform analysis)

UFTR Status – New Control Room

PEF selected the renovation of the UFTR Control Room, and provided \$425,000 that will be matched (one-to-one) through the *Alec P. Courtelis Facilities Enhancement Challenge Grant Program*. We will have a total of \$850,000.

Thanks to:

PEF: Jeff Lyash (persident) & Martha Barnwell (VP)

UF : Dean Khargonekar; Foundation office: Becky Hoover, Chris Needles, and Ann McIlwain

UFTR Status

● Characterization

- Currently, we are in the process of characterizing all access ports of the UFTR
- The access ports are:
 - Thermal column – Besides characterization, we are developing a new design in order to increase the flux level
 - Six Beam ports
 - Water tank – a proposal submitted for development of a system for burnup reconstruction
